Tetraodon nigroviridis
Tetraodon nigroviridis
biriect Submission

Submitted (11.24R-2000) Genoscope - Centre National de Sequencage :
Bu 191 91006 ENRY cedex - PRANCE (8-mail : seqrefégenoscope cms.fr

This sequence is a stinjle read and was generated as part of a large
scale clome-end sequencing project of the Terracodom ingroviridis
genome. For more information, please take a look at
http://www.genoscope.cms.fr/Tetracodom.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rosest Crollius, H., Jaillon, O., Desilva, C., Ozonf-Costas, C., Fizames, C., Carollon, C., Car
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bukaryota; Mētazoa; Chordata; Craniata; Vertebrata; Euteleostoni;

habboutcopy Mouse DNA Recourse

(http://www.jux.cog/resources/documents/domarces/). The DNA
was inducedynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polymucleotick kinase, Andpto orlogomucleotides were
ligated to the blunt ends in high molar excess. The
adaptored BNA was purified and size-sealected for a 9.5 to
10.5 Mr range using preparative agazose gel
electrophoresis. Vector DNA was perpared from a derivative
of pNn22 (gil4732114 [gh] AP129072.1), a copy-number
inducible decrivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored use DNA, and transformed liteo was annealed to
adaptored overcomplement allocal Multonia decreases of complementary to the sheared adaptored consecutive complement and provided the consecutive complement and provided the complement of the sheared adaptored mouse DNA was annealed to
adaptored overcomplement and provided the consecutive complement of the consecutive c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       http://www.jax.org/resources/documents/dnares/. The DNA was bydrocynamically sheared by repeated passge through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with 1% DNA polymerase and 7% polymuclaotide kinase. Adaptor oligonuclaotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 hb range using preparative agarose gel. 10.5 hb range using preparative agarose gel. electrophoresis. Vector DNA was prepared from a derivative of purity (4):473214 [9]:1872071.3] a copy-rumber ligated inducible derivative of planning R. The vector was and with sady brong complementary to the house of the planning and the property of the planning of the pl

poly(df) sequence with a MhoI restriction site. EcoRI adapters were lighted to the blunt-redded cDNA fragments followed by MhoI digestion. The CDNA fragments were directionally cloned into the EcoRI-MOI restriction site of the pBluescript vector. The lighted cDNA fragments were transformed into BHIOB horse cells (Suboc BNA). This
library was constructed in the laboratory of Dr. Randy Shoemaker at Iowa state university."

The EcoRI-NoII respect to the transformed into DMIND host bigated CDNA fragments were transformed into DMIND host cells (Gibbo BRL). This library was constructed by Dr. Randy Shoemaker. This library was constructed by Dr. a 69 c 92 g 132 t

The cDNA fragments were directionally cloned dime the Bookl-Mnol restriction sites of the pbluescript vector. The vector was previously dephosphorylated. The ligated cDNA fragments were transformed into DH10B by electroporation. Inbrary is in 1B medium with ampicillin and glycerol 8t. Average insert size: 800 bp."

These genes include sequences encoding the bone staloprocesh, the matrix gla protein (MgP), osteopontin (OPM) and cotoportegarchin (othick) actor (OPG/OCTF). G at this position is associated with a higher peak bone mass. Along with the other polymorphic sites, this variable sequence can be used to predict an individual's predisposition to osteoporosis and atheroscierosis, thus enabling entire treatment and preventive measures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence shows the polymorphic sit was position 149% of the month one slatoprotes (BSP) gene promoter. It was used in the of the invention, which involve the determination of the promoter.

commendation relates to a novel gene therapy composition comprising a commendation one saidoprotein (asp) prometer operably linked to a gene espence encoding a toxic and/or therapeutic protein contained within a condition of the process gene expression in tissue and tumour cells with containing the toxic gene expression in tissue and tumour cells with containing the toxic protein contained within a calcification potential, it is active in fully-differentiated osteoblasts of hone, in trophoblastic cells of the placenta, and in cementum and contain of teeth. It is also active in a vuriety of human tumours or the placenta and increment and the containing the composition of the invention may be used to treat estection the containing the composition of a gene encoding a protein such as processed of expression of a gene encoding a protein and a placent protein and a containing the composition of the containing a protein and a containing the containing the containing to the containing to the containing the containing

The proceduration of potential new targets of invention is also useful for the identification of potential new targets of or antiblotic development. The antisance models cade son also be used to consider the identification of potential new targets of or antiblotic development. The antisance models cade son also be used to consider the second of the procedure of the antisense models and sequence is also useful to occase the procedure and the useful to coronate occase and the procedure of the procedure and the sequence of the procedure of the procedure of the sequence of the procedure of the

New isolated Enterococcus facealis polymodactides and polypeptides

- used to develop products for the detertion of Enterococcus and for

use in accines for prevention or attenuation of Enterococcus
```

Claim 1; Page 429-438; 2084pp; English.

primary much oritic sequences, also known as contigs. The computer-based bytems can identify fragments of the Enterocongue faccalis (genome with owners) in importance. The products can be used to detect the presence of Enterocongue faccalis in samples. They can also be used for designosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcas faccalis, or another related organism, in two or in vitro. In particular the polypeptides encoded by the Enterococcas faccalis uncleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal A computer readable medium has been developed which has recorded on 982 nucleotide sequences isolated from the Entercoccus faecalis ger AMX12338 to AMX13919 represent these nucleotide sequences which are genome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a new computer readable medium with an Enterconcous facealis mulacotide sequence. The invention is useful to diagnose the presence of 8.facealis in a sample or determining the presence of a specific microbe in a sample. The invention is also useful for modulating the growth or pathogenicity of E.facealis, in a vaccine to confer resistance to Enterconcocal infection, for commercial therapeutic and industrial purposes, and for fermanting a particular sugar source or to produce a particular metabolise. The invention is useful for detecting diseases related to Enterconcocal sinfections in animals, and for detecting E.facealis using biochip technology. The present mulcied acid sequence represents an Enterconcous faccalis contiguous parameters.
The invention relates to human RWA gyrase 12, the polymuclectide encoding this polyepride and NNA recombinant techniques to produce the applying polypeptide. The present invention also discloses a method of applying this polypeptide to treat various diseases, such as malignant tumour,
                                                                                                                                                                                                  New polypeptide-human RNA unwindase 12 polypeptide -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CN1311325-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; RNA gyrase 12; malignant tumour; haemopathy; HTV; infection;
human immunodeficiency virus; immunological disease; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human RNA gyrase 12 encoding cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-MAR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABA05477 standard; cDNA;

The invention relates to a nucleic acid comprising a sequence of 18 hases, of a sequent of chemically pretreated max (or publ) e.g. with bisulphile, of genes associated with tumour suppression and concepted sharing a sequence taken from 536 (activally 53) since concepted sharing a sequence taken from 536 (activally 53) since concepted sharing a sequence taken from 536 (activally 53) since concepted and so are missing from the sequence listing sequences (S8) and sequences complementary to (S8). The nucleic acid may be a capable from part of a set of probes for detecting the nucleotides and may complementary to (S8). The nucleic acid may be a capable from the sequence sharing the sequence of the probes for detecting the cytosism eachlylation state candors single mucleotide polymorphisms and also to be used in a method for capable from the sequence in the diagnosis and compared to another set of genetic parameters for the diagnosis candors that any of sequence and the secretary and the secretary because of the prediction to specific confidence acriving as battlet or flag research sequence is one of the state of the sequence are one of the sequence as sequence are one of the sequence as sequence are one of the sequence are one of the sequence are of the sequence are one of the sequence are of the sequence are of the sequence are one of the sequence are one of the sequence are of the sequence are one of the sequence are of the sequence are one of the sequence are of the sequence are one of the sequence are one of the sequence are of the sequence

Pragments of chamically modified gense associated with tumour suppressor gense and oncogense, useful in designing primares and probes for analysing diseases associated with cycosine methylation state e.g.

Claim 1; SEQ ID No 411; 27pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gene, liver cancer; ds; hepatocellular carcinoma hepatotropio metastatic liver tumour; cytostatic; expression profile; disease state; disease progression; drug coxicity; drug efficacy; drug metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Oncogenes.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at
                                                                                                                                                              expression of two or more genea represented in ABM9303-ABM97455 in a tissue sample. The method of the invention has bepartorroot, and optomization activity. The method is useful for diagnosing and detending the progression of liver cancer, hepstocellular curcinoma and metastatic liver carcinoma, in a patient. The method is useful for identifying as markers that can be used to monitor disease times, disease progression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WO200229103-A2

Screening for anti-neoplastic agent involves exposing calls to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set

Claim 1; SEQ ID 6941; 44pp; English

The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical capent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (1) of a signature gene set, where (1) comprises a sequence (8) selected from 8447 sequences (given in ABIG1664 or ABIG101), or is an Least 95' Mederical, or (8), where a change in the compression of an anti-neoplastic agent, and can be the plant in a to be used for screening capent, and can be used for producting a product which cape is the data collected with respect to the anti-neoplastic agent as a convey the chemical capent is the data of caper such as colon, breast, remach, lung, thyroid, ceepingsel, overlan, kidney, prostate or pancreatic cancer.

Converted to cancer such as colon, breast, remach, lung, thyroid, ceepingsel, overlan, kidney, prostate or pancreatic cancer. infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine papillary carcinoma and Wilm's tumour.

Sequence 3610 BP; 1322 A; 622 C; 963 G; 703 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                       capable of detecting 1000 or more genes from Drosophila. The invention useful in developments bology and in cluvidating cell signaling and coll-cell interactions in higher entaryones for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (BELG17-3BEJ0511), expressed DNA sequences (BELG17-3BEJ0511) expressed DNA sequences (BELG17-3BEJ0511).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention is related to a Lactococcus lactis nucleotide sequence (ABASSI21) and earlier products (ABASSI2). The mudeic acid sequence is useful in the detection and/or amplification nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention halps research in lactic bacceria, particularly useful in the production of 1990ut and choses.

isolated nucleic acid for diagnosing and treating cervical cancer for assessing and detecting compounds for treating the cancer

Page 513; 1051pp; English.

The invention relates to novel genes (AMH89727-AMH7388) associated with cervical cancer with cytocetaic sectivity. The nucleic acids and encoded polyappitics are useful; to assess if a patient is afflicted with cervical cancer or has a premailignant condition. To motifor the progression of cervical cancer or a premailignant condition in a patient; and to estect and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The motiform cards may also be usetul for gene therapy.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
